

ChargePoint Network Fleet Manager

CENTRAL OPERATIONS FOR ELECTRIC VEHICLE FLEET CHARGING

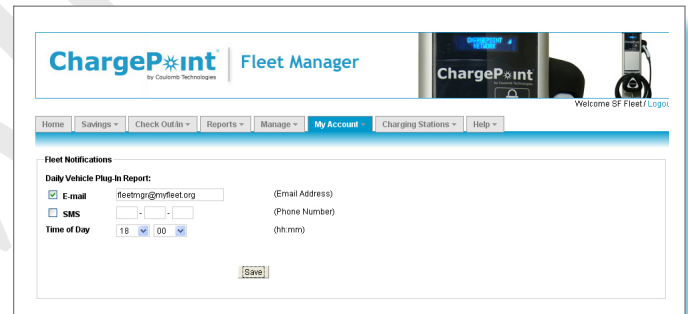

Coulomb Technologies' web-based ChargePoint Network Application Services make it easy to manage and maintain ChargePoint Charging Stations for every business need. The ChargePoint Network Fleet Manager provides fleet management staff a centralized point of management and control for delivering electric fuel with ChargePoint Charging stations to their electric vehicle (EV) fleet.

Determine real-time fleet-wide EV charging status

View status and location of every vehicle in your fleet charging within the ChargePoint Network. The Fleet Manager map provides easy to read car symbols indicating where vehicles are charging with color coding to indicate status: fully charged, charging, or not-plugged-in.

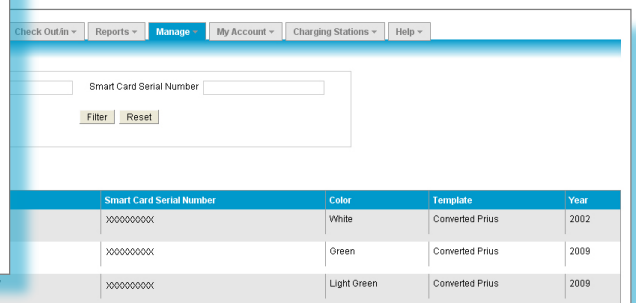

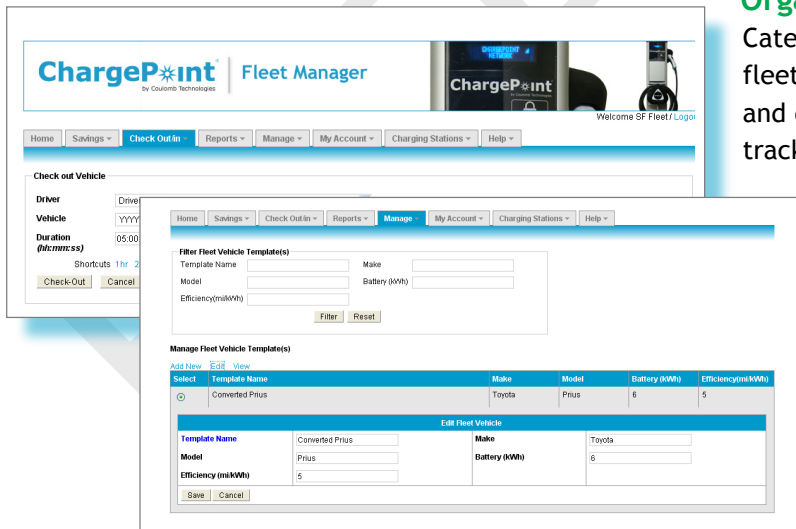

Ensure EV availability for every business day

Never be surprised by an uncharged vehicle. The ChargePoint Network will alert you to fleet vehicle charging issues before they become costly operational failures. Elect to receive a daily e-mail or SMS summary of charging status for your entire electric vehicle inventory to ensure that all fleet vehicles are fully charged for the next business day. And, elect to receive SMS or Email alerts for charging complete, or charging-due status for each EV in the fleet.

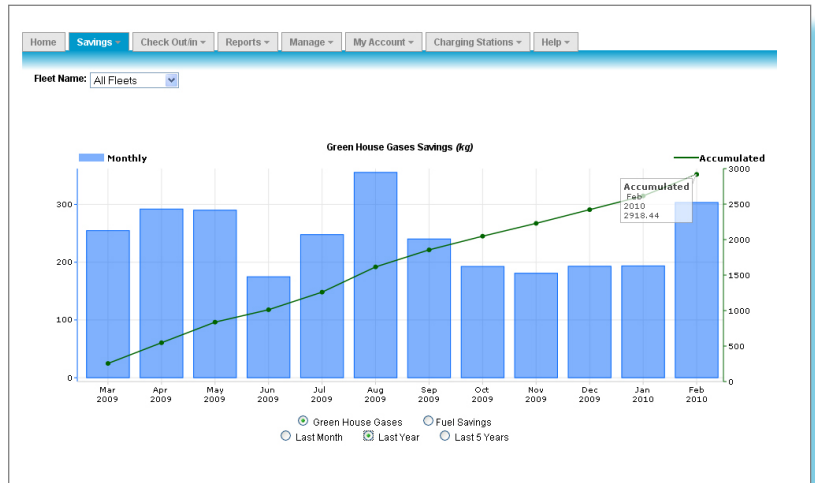

Organize the EV fleet

Categorize templates that represent each EV type in your fleet inventory. Organize vehicles by fleet, department and driver. Always know who is in the driver seat and track driver behavior by using the Fleet Manager check-in and check-out workflow to ensure drivers are matched with an EV when they need to be.

Track greenhouse gas and fuel efficiency savings

Track and report greenhouse gas reduction, fuel efficiency and other data needed to manage and to measure the effects of a clean EV fleet. View greenhouse gas saving data by driver, vehicle, department or fleet. Track and monitor vehicle usage data, by charging session, with information including start/stop time, charge duration, electricity used, driver to vehicle interaction, greenhouse gas and gasoline savings. Export and combine data with other vehicle information to manage vehicle lifecycle and to calculate equivalents for other savings.

FEATURE LIST

Feature	Description
Real time EV charging location and status	View real-time charging status of all fleet EVs. Show fleet EV location and status on the map when EV is charging.
Fleet summary alert	Elect to receive daily SMS, Email fleet vehicle charging summary status.
Vehicle due to be plugged-in alert	Elect to receive SMS, Email alert when any fleet EV charging is due.
Vehicle charged alert	Elect to receive SMS, Email alert when any fleet EV charging is complete.
Vehicle charging fault alert	Elect to receive SMS, Email alert when a charging fault occurs for any fleet EV (Plug Out, GFCI Trip, Abnormal Termination, Over Current Detection).
Usage reports	View graphical or tabular usage reports, with CSV export, for all or individual fleet EVs. Filter the report to include only the desired dates and vehicles.

ABOUT COULOMB TECHNOLOGIES

Coulomb Technologies provides the most advanced, easy to use electric vehicle charging infrastructure for municipalities, businesses and utilities - the ChargePoint® Network. Electric Vehicle (EV) charging is delivered via ChargePoint® Networked Charging Stations which cover the entire range of Level I, Level II, and Level III electric vehicle charging needs. The ChargePoint Network provides station owners a centralized view of the charging stations anywhere there is Internet connectivity. Web-based ChargePoint Network Software Application Services make it easy to provision, manage and maintain ChargePoint Charging Stations for every business need.
